HMI & PLC + I/O

Embedding a fast and efficient PLC and I/O into a single, integrated system

With HMIcontrol, has been expanded the power of UniOP family of HMI panels by embedding a fast and efficient PLC and I/O into a single, integrated system. The PLC modules are compatible with all UniOP products and are IEC 61131-3 compliant. HMIcontrol is the ideal solution for basic applications or as a complement to existing control systems. It can be used as a standalone PLC for advanced computations, scaling, or in combination with I/O systems for machine control. The UniOP panel maintains its inherent connectivity to drives, bus systems and more while performing HMIcontrol functionality.
